

```

public interface EmployeeDao {
    void addEmployee(Employee e);
}

@Repository
public class EmployeeDaoJdbcImpl implements EmployeeDao {
    ...
}

@Service
public class AppService {
    @Autowired
    private EmployeeDao employeeDao; ✓

    public void task(Employee e) {
        employeeDao.addEmployee(e);
    }
}

```

READY
TO
USE

WIRING

```

@Repository
public class EmployeeRepoJdbcImpl implements EmployeeRepo {
    @Override
    public void addEmployee() {
        System.out.println("Stored in database!!!");
    }
}

```

```

@Service
public class AppService {
    @Autowired
    private EmployeeRepo employeeRepo;

    public void doTask() {
        employeeRepo.addEmployee();
    }
}

```

```

@Component
public class SampleClient implements CommandLineRunner {
    @Autowired
    private AppService service;
    // executes as soon as spring container is created and initialized
    @Override
    public void run(String... args) throws Exception {
        service.doTask();
    }
}

```

```

@SpringBootApplication
public class SpringDemoApplication {
    public static void main(String[] args) {
        // this line is what creates Spring Container
        SpringApplication.run(SpringDemoApplication.class, args);
    }
}

```

Field employeeRepo in AppService required a single bean, but 2 were found:

- employeeRepoJdbcImpl:
- employeeRepoMongoImpl:

Solution:

```
@Service
public class AppService {
    @Autowired
    @Qualifier("employeeRepoJdbcImpl")
    private EmployeeRepo employeeRepo;
```
