Realization Relationship:

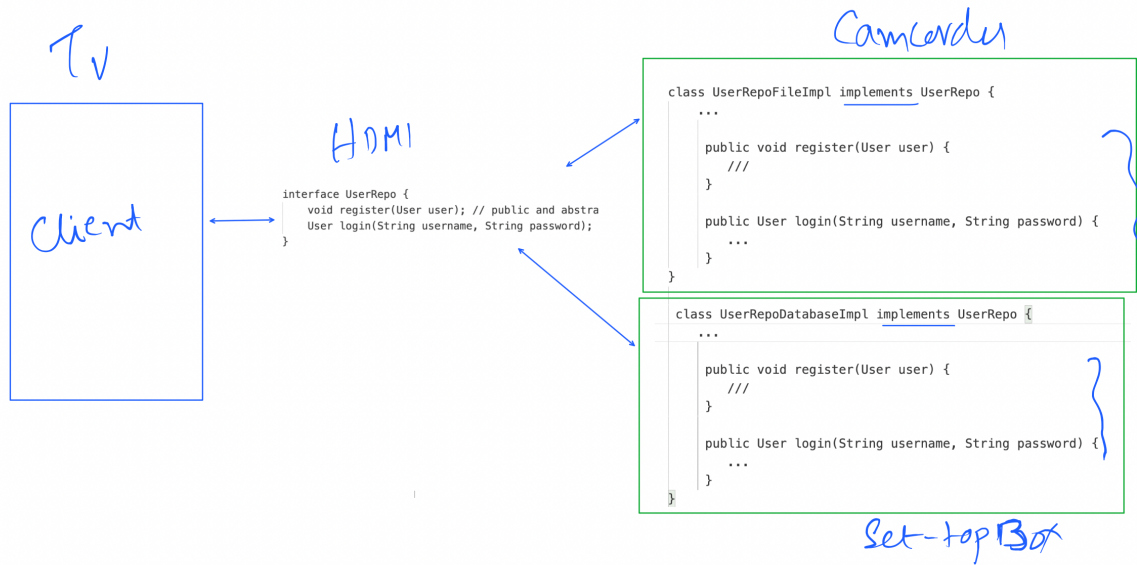

Contract

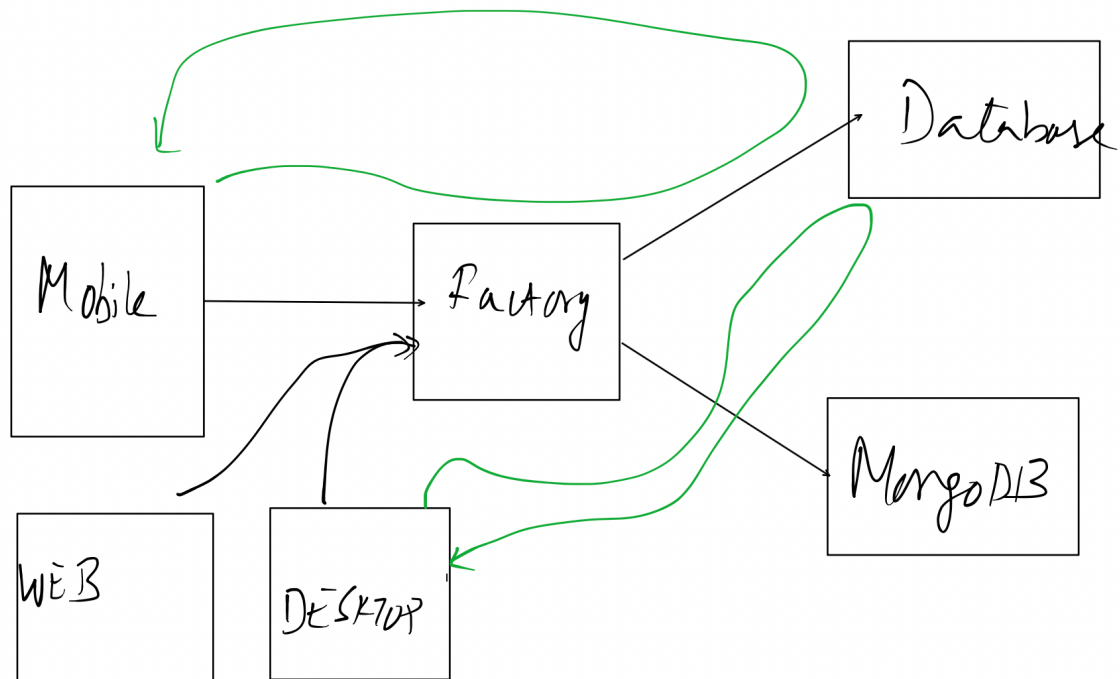

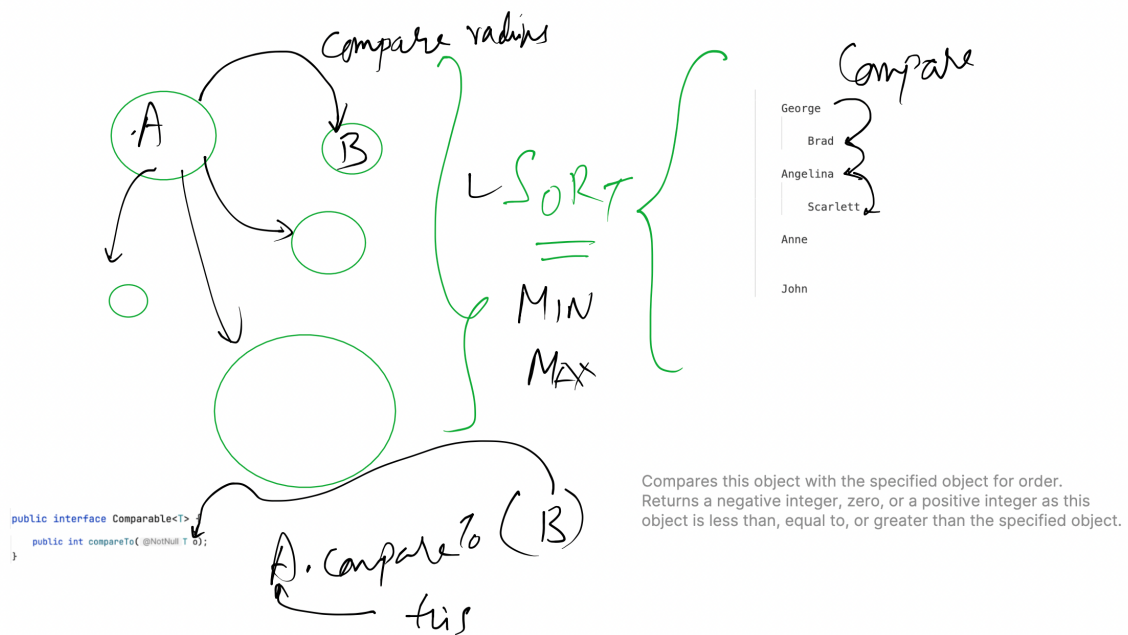

Interface

Object can realize many contracts / protocols

```
interface Swim {
    swim();
}

interface Dance {
    dance();
}

interface Fight {
    fight();
}
```

```
// actor is capable to dance
class Actor implements Dance {
    ...
    dance() {
    }
}

// hero is a actor; naturally hero also knows to dance
// hero is also capable to fight and swim
class Hero extends Actor implements Fight, Swim {
    fight() {...}
    swim() {...}
}
```

```
Fight f = new Fight(); // error, abstract

Fight f = new Actor(); // invalid; Actor doesn't know fighting

Fight f = new Hero(); // valid

f.fight(); // works
f.dance(); // fails
f.swim(); // fails

Dance d = (Dance) f;
d.dance(); ✓
```

Stunt Master
DIRECTS FIGHT → SEQ ✓

Stunt Master
cant direct Dance

Collection Framework Hierarchy in Java
